1 Speaker Reflections

Thanks to Chris to give us such a great presentation, and I feel a little excited to listen to what Chris talks about. Now I feel I know about commercialization more than before due to so much wonderful talk. I have actually learned more than I once expected. That allows me to be surprised. Meanwhile, I am sure that this course shows us wide choices and opportunities instead of only your Ph.D. degree. From this lecture, I get lots of small thoughts that may not come sure but that can enable me to move out of the comfortable zone to face new challenges in my life. So, I think these are invaluable for me.

In addition, I would like to try to work in the industry after I get my degree because now I am very feeling to be a deep learning engineer who is employed by a big tech company. However, I also like to conduct research in the academic world. I know I cannot prepare for two different choices as I do not have too much energy. Nevertheless, I know to get a degree is my first and important goal for 3 or 4 years. If I have gifts and luck in the research, I will keep walking on the path. On the contrary, I may dive into the industry to create my own value.

It is hard to say I drill something truly from this talk but I do have more ideas for my future and career. I really appreciate Chris, and I hope we can have increasing numbers of great talks like this in the future.
